

Brief Information about
Tropical Depression Four-E
23 - 25 July 1999

Jack Beven
National Hurricane Center
3 August 1999

An area of disturbed weather, associated with a tropical wave that moved into the eastern Pacific on 15 July, was first noted near 10N 119W on 20 July. The initial development was slow, with the system becoming Tropical Depression Four-E on 23 July (Table 1). Moving westward, the depression was close to tropical storm strength early on 24 July. The associated convection became disorganized as the cyclone crossed into the Central Pacific Hurricane Center (CPHC) area of responsibility later that day, and the depression dissipated early on 25 July.

Table 1. Best track, Tropical Depression Four-E, 23 -25 July 1999

Date/Time (UTC)	Position		Pressure (mb)	Wind Speed (kt)	Stage
	Lat. (°N)	Lon. (°W)			
23/0000	13.5	130.7	1009	30	tropical depression
0600	13.7	132.1	1008	30	“
1200	13.8	133.4	1008	30	“
1800	13.8	134.8	1007	30	“
24/0000	13.9	136.2	1007	30	“
0600	14.0	137.9	1007	30	“
1200	14.1	139.6	1008	30	“
1800	14.2	141.5	1008	30	“
25/0000	14.4	143.7	1009	25	“
0600					dissipated
24/0000	13.9	136.2	1007	30	minimum pressure
